

# Capturing

## How do I prevent clips from going into a collection?

Sometimes you want to prevent new clips from cluttering up your other collections.

Each collection has a "garbage avoidance" setting, which you can use to reject new clips - rejected clips go into the InBox. Right-click on a collection, select Properties, and then turn off the "accept new clips". They'll now "bounce" into the InBox.

### Advanced Tip....

If you have a bunch of collections, you can set them all quickly by dealing with the database directly. Go to Config | SQL Window, and erase the default query at the top of the window. Paste this in there:

---

```
update coll set acceptnewclips = false  
where id > 1;
```

---

Re-start, and all collections except for the InBox, are now set to reject new clips.
